The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 5, and 6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Jancik.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jancik. Jancik does not disclose a holographic optical element. However, the examiner takes official notice that such devices are commonly known. Jancik does make clear that various lighting devices and the means to adjust them may be used to effect the line. It would have been obvious to one of ordinary skill in the art to have used a holographic optical element as such a device if such were the most readily available to the ordinarily skilled artisan.

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jancik in view of Rowe. Jancik discloses the claimed device with the exception of using the device to project multiple line segments or areas. However, as disclosed by Rowe it is known in darts to use multiple line segments or areas 30, 32. It would have been obvious to one of ordinary skill in the art to have used Jancik's device to generate such multiple line segments or areas if it was desired to play a dart game like Rowe's.

Application/Control Number: 10/711,012 Page 3

Art Unit: 3711

Welch, Macroglou, Carney, Quadri et al., and Abusson et al. have been cited for interest because they disclose similar devices.
